## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election of Group I, claims 1-2 in the reply filed on 5/2/06 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Fujimoto et al. (6,141,991). Fujimoto et al. disclose a method for molding lens by heating and compressing a glass element between oppositely placed first and second cores (201a, 201b), each having a compression molding surface with depressions formed on the surfaces and molding a plurality of convex or concave elements, while providing restriction means (210) for preventing the glass element from escaping in a direction perpendicular to a compression of the glass element (col. 2 lines 21-22, figure 4).

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Budinski et al. (6,305,194) in view of Takano et al. (English Abstract of JP 01226745). Budinski et al. disclose a method for molding lens by heating and compressing a glass element between oppositely placed first and second cores (102, 104), each having a compression molding surface with depressions formed on the surfaces and molding a plurality of convex or concave elements (Fig. 5 col. 1 lines 40-49), while under vacuum (col. 7 lines 4-6). Budinski et al. do not teach of restriction means. Takano et al. teach using restriction means (12) for preventing the glass element from escaping in a direction perpendicular to a compression of the glass element in drawing 3. It would

Art Unit: 1731

have been obvious to one of ordinary skill in the art at the time the invention was made to utilize the restriction means of Takano et al. in the molding process of Budinski et al. in order to define the thickness of the lens made.

6. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Fujimoto et al. (6,141,991), as applied to claim 1 above, in view of Budinski et al. (6,305,194). Fujimoto et al. do not disclose a molding process preformed in vacuum. Budinski et al. teach of molding lens in a vacuum (col. 7 lines 4-6). It would have been obvious to one of ordinary skill in the art at the time the invention was made to utilize vacuum as taught by Budinski et al. in the molding process of Fujimoto et al. in order to minimize void formation.
